

Day 3 – Learning HTML5 Structure

Work Done / Learning:

This day was dedicated to learning and applying HTML5. I created the basic structure of the travel planner homepage using semantic elements like `<header>`, `<section>`, `<article>`, and `<footer>`. The mentor emphasized code readability and proper indentation. I also learned to link external stylesheets and scripts efficiently.

Challenges Faced:

Designing a flexible structure that would later support maps, forms, and 3D content required careful planning. Balancing between clean layout and scalability was a bit tricky.

Conclusion / Outcome:

I successfully completed a structured HTML layout that would serve as the foundation for later CSS and JavaScript integration.
