

## **Day 12 – User Input Validation & Travel Modes**

### **Work Done / Learning:**

Created input validation to prevent incorrect or empty entries. Added different travel modes such as car, walk, and flight. Each mode displayed distinct travel information and route estimates.

### **Challenges Faced:**

Implementing conditional logic for multiple travel modes required careful handling of variable states.

### **Conclusion / Outcome:**

The travel planner became more reliable and user-friendly, improving usability and preventing data errors.
