

Day 8 – Designing Responsive Layout with Glassmorphism

Work Done / Learning:

I applied the glassmorphism design style using transparency, blur, and subtle shadows to create modern interface elements. I built a navigation bar and information panels with smooth hover effects. The mentor explained design consistency principles like color harmony and visual hierarchy.

Challenges Faced:

Creating balance between text readability and transparent backgrounds was challenging. The blur effect impacted performance on low-end browsers.

Conclusion / Outcome:

After refining the design, I achieved a visually attractive, modern, and responsive layout that aligns with current UI/UX trends.
